The screenshot shows a terminal window with the following commands and output:

```

# mousepad recon.sh

(root@kali)-[/home/hackingaja/recon]
# ls
hasilscan.txt latihan.sh recon.sh setup-r

(root@kali)-[/home/hackingaja/recon]
# mousepad recon.sh
```

The mousepad editor shows the following script content:

```
/home/hackingaja/recon/reconn.sh - Mousepad
File Edit Search View Document Help
Warning: you are using the root account. You may harm your system.
1 #!/bin/bash
2 # Find subdomain, then probe them
3
4 TARGET=$1
5
6 subfinder -d $TARGET -v | httpx -tech-detect -status-code -title -v >
  hasilscan.txt
7
```

Langkah pertama setelah saya membuat direktori baru, saya membuat file berbentuk recon.sh. dan saya membuat script seperti di atas.

The screenshot shows the terminal output of running the script:

```
(root@kali)-[/home/hackingaja/recon]
# ./reconn.sh ubl.ac.id

Subfinder
projectdiscovery.io

KALI

projectdiscovery.io

[INF] Current subfinder version v2.14.0 (latest)

```

Lalu script yang saya buat berjalan dengan perintah `./recon.sh` sebelum menjadi seperti itu saya lakukan `chmod +x` kepada recon.sh untuk bisa menjalankan hanya menggunakan command `./recon.sh`

The screenshot shows the terminal output of the `ls` command:

```
(root@kali)-[/home/hackingaja/recon]
# ls
hasilscan.txt latihan.sh recon.sh setup-recon.sh ubl.ac.id_webprobes.txt
```

lalu hasil scan tadi saya buat menjadi output hasilscan.txt

```
(root@kali)-[/home/hackingaja/recon]
# cat hasilscan.txt | sort -u
```

Lalu saya juga menggunakan command di atas supaya bentuk laporan bisa tersusun dari A-Z.

```
(root@kali)-[/home/hackingaja/recon]
# cat hasilscan.txt | sort -u
